

Experience a new beat for the servo press in action – at EuroBLECH 2008 in Hanover

**EuroBLECH
2008**

21–25 October 2008
Hannover
Hall 14, Booth G32

As a machine builder or plant operator, you need **to be able to respond flexibly** to increasingly specific client demands: with a broad range of product variations and smaller lot sizes. **Learn about optimal ways to address these challenges – at EuroBLECH 2008 in Hanover, with Siemens.**

What awaits you?

Under the motto **“new beat for the servo press,”** we will be introducing innovative systems, products and solutions between **21– 25 October** that offer optimal **flexibility, reliability and productivity.**

Forming the centerpiece are our **future-oriented solutions for servo presses with efficient energy management** – using SIMOTION motion control systems and the SINAMICS S120 drive system. Together with the unique Metal Forming Solution Package, this system platform offers you **an ideal solution for all types of metal forming tasks.**

And there's more: In addition to numerous other metal forming topics, we will also be showcasing solutions for hydraulic presses and proven handling solutions, to name a few of the highlights.

Witness **integrated automation solutions for metal forming machines** from a single source up close – for example, the simulation of an entire press line – directly at our booth **(Hall 14, Booth G32).**

We look forward to welcoming you among our guests in Hanover!

P. S.: Visit us at EuroBLECH 2008, and learn how you can significantly increase your productivity and quality – and drastically reduce costs. With Siemens.
