We will clarify your questions

Dear Mr. Sampleperson,

From 24-30 April 2008 we are appearing again on site for you at the interpack in Dusseldorf under the motto **Answers for Industry**.

Are you looking for intelligent automation and drives solutions?

We will be showing a high-performance solution for a Delta 3 Picker application on basis of the new interpolation function with SIMOTION and a Siemens vision system. As a further highlight, you can see an e-pedigree live demonstration in the area of pharmaceuticals. This model impressively demonstrates how compliance with statutory requirements is achieved today for innovative solutions with Siemens standard components.

Do you want to reduce time-to-market and thus minimize costs?

With our Optimized Packaging Line concept we will present to you integrated automation for packaging machines and lines. A control master station will outline the advantages of standardized interfaces and components, which are interconnected via vertical and horizontal communication. Scalable tools enable you to observe the status of the linked machine solutions. Further advantages include central diagnosis, downtime management, backup and recovery and engineering of machines.

I look forward to welcoming you to interpack 2008.

Yours sincerely

Customer Services Account Manager
