

Seamless integration in just a moment

The new Foundation Fieldbus module completes the range of digital communication modules and makes flow measuring easy.

SITRANS F

Siemens flowmeters are based on a highly modular concept - allowing flowmeters and sensors to be installed, configured and operated into any control system by using the latest digital communication protocols like Foundation Fieldbus, PROFIBUS and others. USM II, the Universal Signal Module is based on the simple "Plug & Play" principle. This principle makes integration and installation up and running within seconds, saving time and money thanks to easy and fast replacement of bus modules. The new Foundation Fieldbus communication module is fully approved by the Fieldbus Foundation.
