

# Accurate and reliable flow measurement on-the-go.

SITRANS FUP1010 portable flowmeter travels where you do.

The SITRANS FUP1010 portable clamp-on flowmeter is the perfect tool for verifying the accuracy of any brand or type of flowmeter. It accurately computes flow over an extremely wide range so whether the device is based on electromagnetic, ultrasonic, orifice or rotary piston measuring principles makes no difference. The meter measures practically all conductive or non-conductive clean or moderately aerated liquids or liquids with suspended solids.

Since the SITRANS FUP1010 is of the clamp-on meter type, it utilizes external sensors that can quickly and easily be installed on the outside of the pipe. This allows the meter to be transported from one installation to another facilitating the performance of on-site flow surveys and monitoring of temporary or permanent flowmeter installations.
