

SITRANS LR260 and LR460 – radar solutions for solids level measurement

with the reliability of Process Intelligence echo processing

SITRANS LR

Siemens offers two continuous level transmitters to meet all of your solids level measurement needs. SITRANS LR260 is the 2-wire radar pulse level transmitter of choice for continuous level measurement of solids up to 30 m (98 ft). SITRANS LR460 is the 4-wire FMCW solution for long ranges up to 100 m (328 ft). Both use high frequency radar technology (25 GHz) and therefore dust and temperature extremes are handled without difficulty. Process Intelligence echo processing ensures reliable dynamic echo evaluation and unparalleled signal amplitude gives reliable readings on sloped surfaces and low dielectric powders. The narrow beam, small antenna, and built-in Easy Aimer allow installation practically anywhere on your silo top. More information: www.siemens.com/radar
