

# The reliability of Sonic Intelligence

Accurate ultrasonic level measurement solutions

## SITRANS LU

From basic continuous level measurement to complete lift station monitoring and control, Siemens technology is the preferred choice for water distribution and wastewater plants worldwide. Our full range of cost-effective ultrasonic systems feature patented Sonic Intelligence® software for repeatable, fast and reliable level measurement. Supported by field data gained from over a million level applications Sonic Intelligence differentiates between true echoes from the material versus false echoes from obstructions or electrical noise. Simply put, Sonic Intelligence makes our level measurement instruments the most dependable level monitoring and control instruments on the market.
